

THERMASPRAY

Thermaspray's exclusive Valvemax coatings now available to other valve manufacturers

Thermaspray's proprietary Chrome Carbide and Tungsten Carbide wear-resistant coatings were developed specifically for use in ball and butterfly valves, and were supplied exclusively to Ragon.

In August 2012 Ragon commenced developing their own coating and Thermaspray no longer coats any Ragon products. It is important to note that the coating currently offered by Ragon is not the original, proven "Valvemax" (Thermaspray trade name) coating, which was marketed by Ragon under the name "Ragmax".

As Thermaspray is no longer bound by its previously exclusive agreement with Ragon, we are delighted to announce that we are now able to offer this unique coating to other valve manufacturers.

Both the technique and powders used in the application of Valvemax have been carefully refined over the last 10 years. The coatings have been trialed successfully in a number of severe applications (mining and others) and the results shows conclusively that Thermaspray's Valvemax coating is extremely effective and by far outlasts any competitors' coating.

Please call Thermaspray to discuss how we can help you improve the performance and prolong the lifespan of your product range.

I look forward to hearing from you.
